Allosteric Linkage between Voltage and Ca^{2+}-Dependent Activation of BK-Type mslo1 K^+ Channels, by Jianmin Cui* and Richard W. Aldrich, Volume 39, Number 50, December 19, 2000, pages 15612−15619.

Page 15616. In the fifth line of the paragraph immediately following Scheme 1, (K_O/K_C) should read (K_C/K_O).

Page 15617. Equations 9 and 12 should appear as follows:

$$\Delta G_{V,Ca} = kT \ln\left\{\frac{1}{L(V)}\left\{\left(1+\frac{[Ca]_i}{K_d}\right)^4 + 4K(V)\left(1+g\frac{[Ca]_i}{K_d}\right)^4 + 6K(V)^2\left(1+g^2\frac{[Ca]_i}{K_d}\right)^4 + 4K(V)^3\left(1+g^3\frac{[Ca]_i}{K_d}\right)^4 + K(V)^4\left(1+g^4\frac{[Ca]_i}{K_d}\right)^4\right\}\Big/ \left\{\left(1+\frac{[Ca]_i}{c^{-1}K_d}\right)^4 + 4dK(V)\left(1+g\frac{[Ca]_i}{c^{-1}K_d}\right)^4 + 6d^2K(V)^2\left(1+g^2\frac{[Ca]_i}{c^{-1}K_d}\right)^4 + 4d^3K(V)^3\left(1+g^3\frac{[Ca]_i}{c^{-1}K_d}\right)^4 + d^4K(V)^4\left(1+g^4\frac{[Ca]_i}{c^{-1}K_d}\right)^4\right\}\right\} \quad (9)$$

and

$$\Delta G^I_{Ca} = 4kT \ln\left(\frac{1+\frac{[Ca]_i}{K_d}}{1+\frac{[Ca]_i}{c^{-1}K_d}}\right) \quad (12)$$
